InfoSec Institute: Information Security Training

Ethical Hacking: Security Testing for Professionals
Detailed 5 Day Course Syllabus

Our most popular information security training course goes in-depth into the techniques used by malicious, black hat hackers with attention getting lectures and hands-on lab exercises. While these hacking skills can be used for malicious purposes, Ethical Hacking: Security Testing for Professionals, teaches you how to use these "hacking" techniques to perform a white-hat, ethical hack, on your organization. You leave with the ability to quantitatively assess and measure threats to information assets; and discover where your organization is most vulnerable.

The Best Defense is a Good Offense:
Ethical Hacking: Security Testing for Professionals teaches you a repeatable, documentable methodology that can be used in a professional security testing or penetration testing situation. This security course has a significant Return on Investment, you walk out the door with skill that is highly in demand!

Run attacks in our classroom labs, be a hacker for a week:
Some of the topics you will learn to master during the course...

- Security testing methodologies including the OSSTMM
- Stealthy network recon
- Multi-OS banner grabbing
- Remote root vulnerability exploitation
- Privilege escalation
- Unauthorized data extraction
- Remote access trojans
- Offensive sniffing
- Wireless insecurity
- Breaking IP-based ACLs via spoofing
- Evidence removal and anti-forensics
- Attacking network infrastructure devices
- Brute forcing remotely
- Abusing Web Applications
- Breaking into databases with SQL Injection
- Cross Site Scripting
- Justifying a penetration test to management and customers
- Defensive techniques

Some of the instructor-led hands-on lab exercises...

- Capture the Flag exercises **every night**!
- Abusing DNS for host identification
- Leaking system information from Unix and Windows
- Stealthy Recon
- Unix, Windows and Cisco password cracking
- Remote buffer overflow exploit lab I - Smashing the Stack
- Remote buffer overflow exploit lab II - Getting Tricky
- Remote heap overflow exploit lab III - Beyond the Stack
- Desktop exploitation
- Remote keylogging
- Data mining authentication information from clear-text protocols
- Remote sniffing
- Breaking wireless security
- Malicious event log editing
- Transferring files through firewalls
- Breaking into Cisco routers
- Harvesting web application data
- Data retrieval with SQL Injection
- Calculating the Return on Investment (ROI) for an ethical hack

anti-forensics and unauthorized data extraction.
- Move beyond automated vulnerability scans and simple security scans into the world of ethical hacking and penetration testing.
- More than interesting theories and lecture, get your hands dirty in our dedicated hacking lab.
- Learn hands-on skills that are difficult to gain in a corporate or government working environment, such as anti-forensics and unauthorized data extraction.

What's Included:

- 5 Days of Expert Instruction from an instructor with real-world ethical hacking experience and deep knowledge of course content.
- Guaranteed small class size (less than 10 students), you get an intimate learning setting not offered at any of our competitors.
- Bootcamp style training --- our instructors are teaching from 8am to 10:30pm every day. Course runs from 8am to 5pm daily with optional capture the flag exercises to 10:30pm.
- All meals, snacks and refreshments included.
- Lecture, Lab Exercise and Text book --- Train your friends and co-workers!
- Bootable CD-ROM with many tools used in course, another CD-ROM with every tool and custom script used in course. --- Train your friends and co-workers!

Required Prerequisites:

- Firm understanding of the Windows Operating System
- Exposure to the Linux Operating System or other Unix-based OS
- Grasp of the TCP/IP protocols.
- Desire to learn about ethical hacking, and get great information security training!

If you are unsure if you meet the required prerequisites, **contact us** for a quick skill check.
